

3 Courses

**Introduction to AI for
Cybersecurity**

**Advanced Malware and
Network Anomaly
Detection**

**Securing AI and Advanced
Topics**

Mar 20, 2025

Jhashua Canton

has successfully completed the online, non-credit Specialization

AI for Cybersecurity

In this Specialization, learners will acquire vital skills in applying AI techniques for cybersecurity challenges. They will explore methods for fraud prevention using cloud AI solutions, understand the intricacies of Generative Adversarial Networks (GANs), and learn how to implement reinforcement learning for adaptive security measures. Emphasis is placed on evaluating AI models and performance metrics to ensure robustness and security. Through practical projects and hands-on experiences, learners will apply their knowledge in real-world scenarios, preparing them for careers in cybersecurity where AI plays an increasingly critical role.

Lanier A. Watkins, Ph.D.
JHU EP M.S. Program
Chair, Computer
Science and
Cybersecurity
JHU Information
Security Institute,
Research Professor

The online specialization named in this certificate may draw on material from courses taught on-campus, but the included courses are not equivalent to on-campus courses. Participation in this online specialization does not constitute enrollment at this university. This certificate does not confer a University grade, course credit or degree, and it does not verify the identity of the learner.
